

CONFLUENCE

ENVIRONMENTAL COMPANY

Confluence Environmental Company specializes in the management and delivery of complex environmental projects that involve both hard science and sophisticated project management. Along with our decades of senior-level experience in environmental science and planning, our partners also offer unique, high-level capabilities in project management and regulatory strategy. Our approach ensures that each project is staffed with a team that can deliver the specific requirements of a project with the right level of project management.

PRIMARY SERVICES

Environmental Project Delivery

With ever-increasing complexities - and decreasing timeframes - thorough and insightful project management is essential to a successful endeavor. Confluence Environmental Company offers a wide range of project management support, from initial strategy consulting to fully integrated project delivery.

Ecosystem Analysis, Mitigation, & Restoration

Confluence Environmental Company is a recognized leader in developing large-scale habitat projects and documenting their ecological value. Our scientists are experienced with landscape processes throughout the watershed, with emphasis on aquatic environments including marine shorelines, estuarine habitats, rivers, streams and wetlands. In addition, we are recognized for our specialized expertise in fluvial geomorphology: analysis of physical processes in streams and rivers.

Regulatory Strategy, Compliance, & Permitting

Successful navigation of the regulatory process is a critical component of any development project. Confluence Environmental Company can assess your project's permitting needs, formulate a strategy for complying with regulations, and obtain all necessary permits or approvals. We also assist clients in preparing environmental documentation, including SEPA/NEPA, Endangered Species Act consultation, critical areas reports, permit applications, and other documents needed to support a wide variety of local, state, and federal regulatory requirements.

Confluence Environmental Company is a small business.

Employees: 10

Location:

146 N Canal St, Suite 111,
Seattle, WA 98103
